EDUCATION

Software Engineering, M.S. September 2024 - December 2026 (expected)
University of California, Irvine - Irvine, CA (GPA: 3.84)

Computer Science, B.S., Minor: Data Science August 2020 - May 2024
California State Polytechnic University, Pomona - Pomona, CA (GPA: 3.82, Summa Cum Laude)

EXPERIENCE

Software Engineer, PaintFlow - Remote | Freelance July 2026 - Present

- Developing a **TypeScript**-based **Next.js/React** retail platform from stakeholder and business requirements, integrating customer-facing experiences with staff-facing inventory, billing, and reporting workflows.
- Designing **PostgreSQL** schemas and **AWS** deployment architecture using **RDS** and **EC2** for ERP-style data, searchable records, PDF invoices, and scheduled reports.
- Building responsive customer and administrative interfaces with **Tailwind CSS** and **GSAP**; prototyping an **OpenAI**-powered color-preview module for interactive paint visualization.

IT Support Specialist I, Prime Healthcare - Ontario, California | Full-time June 2024 - Present

- Support enterprise systems across **50+ hospitals**, resolving **300+ incidents weekly** through **ServiceNow** while troubleshooting **application, access, and workflow issues** and improving **First Call Resolution by 10%**.
- Designing help-desk automation workflows for pre-agent information intake, **ServiceNow ticket pre-fill**, and ticket classification/routing assistance to streamline triage and reduce repetitive entry.
- Built an internal **HTML/CSS** dashboard linking time zones with call-tracking workflows for multi-region support.
- Perform pre-deployment validation, issue reproduction, and workflow testing to minimize production risk.

RESEARCH & PROJECTS

Full-Stack Developer, ShareCollectibles.com - Independent Project September 2026 - Present

- Developing a cross-platform collectibles platform for web, iOS, and Android using **React Native/Expo**, **TypeScript**, **Supabase/PostgreSQL**, and **Cloudflare R2**, with a shared codebase and production-style backend services.
- Designed relational schemas, migrations, indexes, and **row-level security** policies for collections, categories, entries, public sharing, reporting, and moderation workflows supporting user-owned content and controlled public discovery.
- Built secure media upload/access flows with **Supabase Edge Functions** and private **Cloudflare R2** storage, enforcing server-side authorization, image validation, file-size limits, and upload quotas.
- Implemented public discovery and moderation with per-item visibility, reporting thresholds, collector blocking, protected admin review, **automated testing and debugging with Playwright**, and **GitHub Actions/Vercel CI/CD**.

Full-Stack Developer, P1withMattandTommyFanPredictions.com - Independent Project January 2026 - March 2026

- Built and shipped a full-stack Formula 1 platform supporting race predictions, driver ratings, and leaderboard tracking for **100+ active users** across race weekends and season-long competition.
- Designed relational schemas and **REST APIs** using **Supabase/PostgreSQL** for users, season-long scoring, rankings, and historical performance data across recurring race events and prediction cycles.
- Engineered deterministic batch scoring logic and reusable **Next.js/React** components for consistent race-day leaderboard state, reliable scoring updates, and sustained user engagement throughout each event.
- Structured clean API contracts and extensible data models to support future analytics and continued expansion.

Graduate Research Developer, Accessibility Analysis Plugin for Figma - UC Irvine October 2024 - June 2025

- Built a real-time **Figma** plugin in **JavaScript** to extract and normalize design metadata for accessibility analysis under the supervision of graduate faculty, enabling automated rule-based evaluation and downstream reporting.
- Implemented rule-based evaluation over Figma design **JSON** aligned with **WCAG** standards and developed an **HTML/CSS** reporting UI to surface accessibility violations, affected elements, issue details, and severity levels.
- Integrated the **OpenAI API** to generate AI-assisted fix suggestions while preserving design intent.

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript/TypeScript, HTML/CSS
Frameworks & Tools: Next.js, React, React Native, Expo, Node.js, Flask, Supabase, Git/GitHub, GitHub Actions, Docker
Cloud & Databases: AWS (EC2, RDS), PostgreSQL, MySQL, MongoDB, Cloudflare R2, Vercel
Core Concepts: Object-Oriented Programming, Data Structures & Algorithms, API Design, REST APIs, CI/CD, Agile Development
